

The Messenger of Mathematics Volume 29-30

Filesize: 6.42 MB

Reviews

Completely essential go through book. This is for all who statte there had not been a worthy of reading through. It is extremely difficult to leave it before concluding, once you begin to read the book.

(Lydia Legros)

THE MESSENGER OF MATHEMATICS VOLUME 29-30

Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book ***** Print on Demand *****.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1900 Excerpt: .fl, Then $12 = 0$ is the condition that the line $lx + my + nz = 0$ should pass through one of the circular points at infinity, and $t = 0$ is the condition that the lines $lx + my + nz = 0$, $lx + my + nz = 0$ should be at right angles. It is known that 6 is the angle between the lines $(/tnn)$, $(l r riri)$, where Further S , the distance between (xyz) , $(x y z)$, is given by 8 , $= (pqrliryn(yz -y z, zx -z x, xy -x y))$. Results from which these can be at once deduced are to be found in a paper by VV. K. Clifford Quarterly Journal of Mathematics, Vol. VII., pp. 54--67, Analytical Metrics cf. Coll. Works, xi. and xvi.). Having stated these results for convenience of reference I proceed to discuss the problem in hand. The point of contact of the line (lmn) with its envelope will be given by where dots indicate differentiation with respect to t . Further, we may take k to be unity without loss of generality. Then the distance between two points on the envelope is 8 , where $8 = (pgr/1) (dty fi (yz--yz, zi--zx, xy--xy))$. We have put $/ =1$ in the denominator, to avoid retaining higher powers of dt . Now we have, on substitution, Similarly the angle between the corresponding tangents is given by If we put $= 1/5$, $q=ja$, $r=l$, $C=w$, and then make...
