Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book ***** Print on Demand *****.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1907 Excerpt: .too, remains the same According to the above we must now imagine a finite space filled with such representing points, an infinitely small pencil of vectors of velocity starting from each point, mutually equal, and also equal for all the points. Js ow a number of these representing points strikes against one of the above mentioned surfaces, e.g. with equation $(, - -) + (/ , - . / ,) + (, - ,) = 4r$; this implies then that for these systems the first and the second molecule collide. This surface is that of a cylindre of revolution of the $3n-3t$, degree, against the outside of which the points strike.1) The base of the cylindre is a sphere, the descriptive lines have here become descriptive spaces, namely plane spaces ot $3/t-3$ dimensions. In the collision referred to, the extension from which the points come being large compared to the dimensions of the section of the cylindre (or at least of the same order) the infinitesimal pencil will extends in the directions of the perpendicular section of the cylindre, so here in 3 dimensions, to a pencil of finite width. If from this we take again an infinitesimal part, it comes from a definite point of each section of the sphere, and so from the points of a descriptive space of the cylindre.) Fart of this strikes again against another cylindre (which e.g. involves collision of the 1st and the 3rd molecule), and the infinitely narrow...
